TELECOM AFTER MARKET SERVICES

DTC International Ltd is a market leading global supplier of legacy and current multi-vendor telecom equipment. For over two decades DTC has supported OEM's, Operators and System Integrators with both end of life spares and platforms still in production. DTC offers an alternative supply chain solution that supports legacy platforms and significantly reduces lead times and costs. DTC has extensive experience supplying parts that can no longer be sourced through the OEM.

A cost effective supply chain for current and legacy embedded network infrastructure allows customers to manage and extend the life of network assets, this in turn supports major operating revenue streams.

DTC's AMS (After Market Services) team advises on spare parts pricing and availability from our extensive stock holdings, asset management partners and trusted approved suppliers, thereby predicting specific sparing shortfalls and market trends.

A trusted, stable supply chain for legacy, end of life and obsolete multi-vendor telecom parts.

-) Up to 3 months advance notice of relevant incoming stock
-) Immediate global shipment of multi-vendor parts from stock, plus a worldwide sourcing network with access to inventories holding in excess of 5 million spares
-) Spare Parts Management; network visibility and technology understanding to create support plans for aged assets and end of life products
-) Predictive sourcing for DTC customers through our global reverse logistics projects
-) Significantly reduced lead times in comparison to the OEM
-) 12 month warranty available on all equipment supplied

Please contact DTC for more information, part numbers and quotations.
